

Titration of lentiviral particles

Physical Particles

*The quantification of the physical viral particles is done by assaying the **p24** protein of the viral capsid by a conventional ELISA test.*

> Unit : VP/ml

Infectious Particles

The quantification of infectious viral particles is done by detection of reporter gene (Facs) or detection of provirus copies number in the infected cells (Q-PCR).

> Unit : TU/ml or ifu/ml or PI/ml
